Campaign Coo26 | MITRE ATT&CK® <https://attack.mitre.org/campaigns/Coo26/>

Coo26 Coo26 was a campaign identified in September 2022 that included the selective distribution of KOPILUWAK and QUIETCANARY malware to previous ANDROMEDA malware victims in Ukraine through re-registered ANDROMEDA C2 domains. Several tools and tactics used during Coo26 were consistent with historic Turla operations.[1] ID: Coo26 First Seen: August 2022 [1] Last Seen: September 2022 [1] Contributors: Yoshihiro Kori, NEC Corporation; Manikantan Srinivasan, NEC Corporation India; Pooja Natarajan, NEC Corporation India Version: 1.0 Created: 15 May 2023 Last Modified: 31 July 2026 Version Permalink Live Version ATT&CK® Navigator Layers Enterprise Layer download view Techniques Used Domain ID Name Use Enterprise T1583 .001 Acquire Infrastructure: Domains For Coo26, the threat actors re-registered expired C2 domains previously used for ANDROMEDA malware.[1] Enterprise T1560 .001 Archive Collected Data: Archive via Utility During Coo26, the threat actors used WinRAR to collect documents on targeted systems. The threat actors appeared to only exfiltrate files created after January 1, 2021.[1] Enterprise T1005 Data from Local System During Coo26, the threat actors collected documents from compromised hosts.[1] Enterprise T1030 Data Transfer Size Limits During Coo26, the threat actors split encrypted archives containing stolen files and information into 3MB parts prior to exfiltration.[1] Enterprise T1568 Dynamic Resolution During Coo26, the threat actors re-registered a CloudDNS dynamic DNS subdomain which was previously used by ANDROMEDA.[1] Enterprise T1105 Ingress Tool Transfer During Coo26, the threat actors downloaded malicious payloads onto select compromised hosts.[1] Software ID Name Description S1074 ANDROMEDA During Coo26, the threat actors re-registered expired ANDROMEDA domains to profile past victims for further targeting.[1] S0099 Arp [1] S1075 KOPILUWAK KOPILUWAK was used as a first-stage profiling utility for previous victims of ANDROMEDA during Coo26.[1] S0039 Net [1] S0104 netstat [1] S1076 QUIETCANARY During Coo26, the threat actors used QUIETCANARY to gather and exfiltrate data.
